

Project Report on Picture Gallery Application

Approach -

1. First I have the gather information an learn some new concept which is needed for the project.
2. After that I have build several templates with pen and paper.
3. Create the search box and grid in the html file.
4. Design the structure and make it responsive in the css file.
5. Create the unsplash account and get the key.
6. Fetch the data from the

unsplash website and put it in the grid.

Challenges -

1. As a fresher, I haven't use unsplash api so I have to learn and understand how to work with it.
2. I give so much time to build this project because of time duration.
3. Initially I think when I fetch the images, the meta data comes with the images but I was wrong and I searched how to get the meta data but didn't get proper result as per my project.
